Navigator appName Property

 [Navigator Object](#)

Definition and Usage

The appName property returns the name of the browser.

Syntax

```
navigator.appName
```

Browser Support

The appName property is supported in all major browsers.

Example

Example

Return the name of your browser:

```
<script type="text/javascript">

document.write("Name: " + navigator.appName);

</script>
```

The output of the code above will be:

Name: Netscape
