Window moveTo() Method

Definition and Usage

The moveTo() method moves a window's left and top edge to the specified coordinates.

Syntax

```
window.moveTo(x,y)
```

Browser Support

The moveTo() method is supported in all major browsers.

Note: Specifying moveTo(0,0) in Opera, results in moving the window to the top left corner of the browser, not the screen.

Example

Example

Move the new window to the top left corner of the screen:

```
<html>
<head>
<script type="text/javascript">
function openWin()
{
myWindow=window.open('','','width=200,height=100');
myWindow.document.write("<p>This is 'myWindow'</p>");
}

function moveWin()
{
myWindow.moveTo(0,0);
myWindow.focus();
}
</script>
</head>
<body>

<input type="button" value="Open 'myWindow'" onclick="openWin()" />
<br /><br />
<input type="button" value="Move 'myWindow'" onclick="moveWin()" />

</body>
</html>
```
