JavaScript prototype Property

[JavaScript String Object](#)

Definition and Usage

The prototype property allows you to add properties and methods to an object.

Note: Prototype is a global property which is available with almost all JavaScript objects.

Syntax

```
object.prototype.name=value
```

Browser Support

The prototype property is supported in all major browsers.

Example

Example

Use the prototype property to add a property to an object:

```
<script type="text/javascript">

function employee(name,jobtitle,born)
{
  this.name=name;
  this.jobtitle=jobtitle;
  this.born=born;
}

var fred=new employee("Fred Flintstone","Caveman",1970);
employee.prototype.salary=null;
fred.salary=20000;

document.write(fred.salary);

</script>
```

The output of the code above will be:

20000
