JavaScript pop() Method

 [JavaScript Array Object](#)

Definition and Usage

The pop() method removes the last element of an array, and returns that element.

Note: This method changes the length of an array!

Syntax

```
array.pop()
```

Browser Support

The pop() method is supported in all major browsers.

Tips and Notes

Tip: To remove the first element of an array, use the [shift\(\)](#) method.

Example

Example

Remove the last element of an array (this will also change the length of the array):

```
<script type="text/javascript">

var fruits = ["Banana", "Orange", "Apple", "Mango"];
document.write(fruits.pop() + "<br />");
document.write(fruits + "<br />");
document.write(fruits.pop() + "<br />");
document.write(fruits);

</script>
```

The output of the code above will be:

```
Mango
Banana,Orange,Apple
Apple
Banana,Orange
```
