JS & DOM Reference JavaScript toString() Method

Definition and Usage

The toString() method converts a Date object to a string.

Note: This method is automatically called by JavaScript whenever a Date object needs to be displayed as a string.

Syntax

```
Date.toString()
```

Browser Support

The toString() method is supported in all major browsers.

Example

Example

Convert a Date object to a string:

```
<script type="text/javascript">
var d=new Date();
document.write("Original form: ");
document.write(d + "<br />");
document.write("To string: ");
document.write(d.toString());
</script>
```

The output of the code above will be:

```
Original form: Thu Jan 05 2012 04:20:18 GMT+0200 (Egypt Standard Time)
To string: Thu Jan 05 2012 04:20:18 GMT+0200 (Egypt Standard Time)
```
