JS & DOM Reference JavaScript constructor Property

JavaScript String Object

Definition and Usage

The constructor property returns the function that created the String object's prototype.

Syntax

string.constructor

Browser Support

The constructor property is supported in all major browsers.

Example

Example

Return the function that created the String object's prototype:

```
<script type="text/javascript">
var txt = "Hello World!";
document.write(txt.constructor);
</script>
```

The output of the code above will be:

function String() { [native code] }
