JS & DOM Reference JavaScript strike() Method

JavaScript String Object

Definition and Usage

The strike() method is used to display a string that is struck out.

This method returns the string embedded in the <strike> tag, like this:

<strike>string</strike>

Syntax

string.strike()

Browser Support

The strike() method is supported in all major browsers.

Example

Example

Display a struck-out string:

var str = "Hello world!"; document.write(str.strike());

<script type="text/javascript">

Try it yourself »

</script>
