# JS & DOM Reference JavaScript prototype Property

# JavaScript Number Object

# Definition and Usage

The prototype property allows you to add properties and methods to an object.

Note: Prototype is a global property which is available with almost all JavaScript objects.

## Syntax

```
object.prototype.name=value
```

## **Browser Support**

The prototype property is supported in all major browsers.

# Example

#### Example

Use the prototype property to add a property to an object:

```
<script type="text/javascript">
function employee (name, jobtitle, born)
this.name=name;
this.jobtitle=jobtitle;
this.born=born;
var fred=new employee("Fred Flintstone", "Caveman", 1970);
employee.prototype.salary=null;
fred.salary=20000;
document.write(fred.salary);
</script>
```

The output of the code above will be:

20000
