JS & DOM Reference Location search Property

Definition and Usage

The search property returns the query portion of a URL, including the question mark (?).

Syntax

location.search

Browser Support

The search property is supported in all major browsers.

Example

Example

Return the guery portion of a URL. Assume that the current URL is http://www.example.com /submit.htm?email=someone@example.com:

<script type="text/javascript">

document.write(location.search);

</script>

The output of the code above will be:

?email=someone@example.com
