JS & DOM Reference Window focus() Method

Window Object

Definition and Usage

The focus() method sets focus to the current window.

Syntax

```
window.focus()
```

Browser Support

The focus() method is supported in all major browsers.

Example

Example

Assure that the new window GETS focus (send the new window to the front):

```
<html>
<head>
<script type="text/javascript">
function openWin()
myWindow=window.open('','','width=200,height=100');
myWindow.document.write("This is 'myWindow'");
myWindow.focus();
}
</script>
</head>
<body>
<input type="button" value="Open window" onclick="openWin()" />
</body>
</html>
```

Try it yourself »

More Examples

Assure that the new window does NOT GET focus

```
Window Object
```
