JavaScript setFullYear() Method

🔺 JavaScript Date Object

Definition and Usage

The setFullYear() method sets the year (four digits), according to local time.

Note: This method is always used in conjunction with a Date object.

Syntax

```
Date.setFullYear(year,month,day)
```

Parameter	Description
year	Required. A four-digit value representing the year
month	Optional. An integer between 0 and 11 representing the month
day	Optional. An integer between 1 and 31 representing the date

Browser Support

The setFullYear() method is supported in all major browsers.

Examples

Example 1

Set the year to 2020:

```
<script type="text/javascript">

var d = new Date();
d.setFullYear(2020);
document.write(d);

</script>
```

The output of the code above will be:

```
Sun Jan 05 2020 04:18:40 GMT+0200 (Egypt Standard Time)
```

Try it yourself »

Example 2

Set the date to November 3, 1992:

```
<script type="text/javascript">

var d=new Date();
d.setFullYear(1992,10,3);
document.write(d);

</script>
```

The output of the code above will be:

```
Tue Nov 03 1992 04:18:40 GMT+0200 (Egypt Standard Time)
```
