JavaScript toLocaleTimeString() Method

🔺 JavaScript Date Object

Definition and Usage

The toLocaleTimeString() method returns the time portion of a Date object as a string, using locale conventions.

Syntax

```
Date.toLocaleTimeString()
```

Browser Support

The toLocaleTimeString() method is supported in all major browsers.

Example

Example

Return the time portion of a Date object as a string, using locale conventions:

```
<script type="text/javascript">

var d=new Date();
document.write("Original form: ");
document.write(d + "<br />");
document.write("Formatted form: ");
document.write(d.toLocaleTimeString());

</script>
```

The output of the code above will be:

```
Original form: Thu Jan 05 2012 04:20:14 GMT+0200 (Egypt Standard Time)
Formatted form: 4:20:14 AM
```
