JavaScript push() Method

🔺 JavaScript Array Object

Definition and Usage

The push() method adds new elements to the end of an array, and returns the new length.

Note: This method changes the length of an array!

Syntax

```
array.push(element1, element2, ..., elementX)
```

Parameter	Description
element1, element2, ..., elementX	Required. The element(s) to add to the end of the array

Browser Support

The push() method is supported in all major browsers.

Tips and Notes

Tip: To add one or more elements to the beginning of an array, use the unshift() method.

Example

Example

Add new elements to the end of an array, and return the new length:

```
<script type="text/javascript">

var fruits = ["Banana", "Orange", "Apple", "Mango"];
document.write(fruits.push("Kiwi") + "<br />");
document.write(fruits.push("Lemon","Pineapple") + "<br />");
document.write(fruits);

</script>
```

The output of the code above will be:

```
5
7
Banana,Orange,Apple,Mango,Kiwi,Lemon,Pineapple
```
