Window outerHeight and outerWidth Properties

🔸 Window Object

Definition and Usage

The outerHeight property sets or returns the outer height of a window, including all interface elements (like toolbars/scrollbars).

The outerWidth property sets or returns the outer width of a window, including all interface elements (like toolbars/scrollbars).

Syntax

```
window.outerHeight=pixels
window.outerWidth=pixels
```
Browser Support

The outerHeight and outerWidth properties only works in Firefox.

Example

Example

Sets the new window to be 200x200 pixels (including toolbars/scrollbars):

```
<html>
<head>
<script type="text/javascript">
function openWin()
{
myWindow=window.open('','');
myWindow.outerHeight="200";
myWindow.outerWidth="200";
myWindow.document.write("<p>This is 'myWindow'</p>");
myWindow.focus();
}
</script>
</head>
<body>

<input type="button" value="Open 'myWindow'" onclick="openWin()" />

</body>
</html>
```
